

This civilization must grow up

There is a classification of civilizations according to their level of development. This begins with the civilization level 0: "Helpless like a baby".

The technology to become an adult civilization and above all also to survive at all, is already present, it is only mental barriers which prevent to use these also in the necessary measure.

People do not accept "God created man in his image", but prefer to hang on to a belief of being little useless pests, the worst expression of this disbelief is "Healthy planets have no people".

People do not accept the full scope of the mandate "Subdue the Earth", which is interpreted in Pope Francis' encyclical "Laudato si" as "tend, protect, oversee, preserve, maintain, guard".

This mandate is much more than "just don't break anything." It is the mission to develop the necessary technology to be able to master this mission for many billions of years.

Infinitism gives new life to these two hitherto little heeded beliefs: "God created man in his own image" as a proof of capability for the solvability of all problems we will encounter in the course of "subdue the earth".

The Infinitismus investigates, which problems come to us, points out, how these could be solved already with the today's technical, natural-scientific conditions of mankind.

At the moment, mankind is since 2 centuries, without being aware of it, on the civilization leap from "helpless like a baby" to "can solve immediate problems". This civilization leap, the coming of age of mankind, has been completed with worldwide prosperity, a successful planetary cleanup and the measures to be able to solve immediate problems. Planetary cleanup means reducing CO2 to 280 ppm pre-industrial levels, or a level that science agrees is the optimum.

Technically this is not a problem, it only requires spiritual leadership. Religion is not a private matter, but must be above politics to provide the guidelines of a civilization, which are then implemented by politics.

I hope for your cooperation in helping humanity in this difficult phase of growing up to finally become aware of the full scope of the mission.

Respectfully

Roland Mösl
